Architect - Persistent Systems
South Goa

Summary

Architect and experienced developer with leading experience. |
Helping customers find their way to the best solution and deliver
amazing experiences and software.

Working with Enterprise clients as an Architect and is responsible for
Web & Digital platform architecture - preparing the Cloud migrations,
starting the adoption of DevOps principle, modernizing the stack to
embrace API, containers and microservices , security etc.

In my career, I've delivered several projects for cloud infrastructure ,
various integrations with marketplaces, learning platforms, Open
Source adoption , sales, collections and business user experience.

_____

Experience

Persistent Systems
Architect
July 2010 - Present (11 years 2 months)
Goa

Working as an Architect in the Cloud & Digital Enablement team. I am
responsible for delivering architecture guidelines for web and digital deliveries,
designing new and innovative solutions to challenges in company and provide
support and results in following areas:

- Leading a transformation of current on-premise services to cloud including
the infrastructure design, selection of Platform-as-a-Service offerings,
providing integration to Software-as-a-Service offerings
- Starting the DevOps culture including Continuous Integration & Delivery,
bringing the automated infrastructure tools to existing teams and setting
guidelines and standards to promote the new software conventions
- Providing the framework for collaboration of multiple in-house and
development teams across locations.
